

# Secure Bike Parking Systems

## Model: BH-201

Stand alone secure bike parking facilities offering sheltered and safe access for bicycle parking. The Bike Hut System is manufactured from recycled materials and includes wireless communication, solar power, security lighting and video surveillance. Access is controlled via BikeConnect's software service. The Bike Hut is modular and additional four foot (4') panels can be added to increase the Bike Hut size and bicycle parking capacity.

### Bike Hut Features

Complete modular system with small footprint for integration into transit hubs, parking spaces, and sidewalks. Dual door system for easy access/egress into the system. Includes secure entry with key fob/RFID access control. Solar powered and wireless communication option allowing for easy installation with virtually little infrastructure improvements required. Manufactured in the USA (buy America compliant) from recycled materials such as aluminum with glass siding option. Standard design supports parking for 12 or 24 bicycles; adding panels increases bike capacity.

### Easy integration into BikeConnect's Software Platform

Web-based interface for managing bike assets. Includes the following basic features:

- Subscription/application submittals
  - Facility Assignment
  - Credit card payment processing
  - Daily reporting of user access and security/monitoring
  - Messaging system for communicating with administrator, cyclists and receiving alerts
- Administrator Features
- Bike asset management integration
  - User access reports
  - Web-based security controls

Pricing starts as low as \$1,499 per bicycle.
